Better Manage Jurors

ATI's **Jury Interactive** system is an indispensable court solution providing jurors quick and easy access for reporting information, postponements, court locations and more. The system includes our Jury Group Administration Tool, which allows the jury commissioner's office staff to manage individual groups' needs, such as special reporting or callback times.

Increase Timely Payments

The **Traffic Pay** system is a very robust interface that enables the public to access info via the phone or web: traffic ticket information, pay fines, register for traffic school, get status updates on traffic school certificates, make payment plans, etc.

Quicken Access to Case Info

ATI's **Case Lookup** module provides secure public access to case information such as mandatory appearances, warrants, payment plans and fines.

Improve Court Appearance Attendance

The ATI **Appointment Reminder System** calls* the parties on your family law cases to remind them of upcoming court events, times and locations. It can also be integrated with the *Jury Interactive* system to call jurors to remind them of upcoming service dates, times and locations. **Information can also be delivered via text message.*

Automate Traffic Courtesy Notices

With this ATI module, the court can automate courtesy notices for traffic including final notices for FTAs, automatic convictions in the case management system and notification to your collections company if the cases are referred. The easy-to-use Web interface provides a report for the presiding judge to approve the cases for conviction. A simple click-and-submit launches the conviction process for cases occurring that week.

Court Technology Solutions

Reduce Labor Costs

Proceedings is a fast, reliable, easy-to-use in-court processing system that can reduce labor by up to 50 percent. When a case is called, the clerk simply selects the case from a list and records events using a straightforward interface designed to follow the flow of a hearing. A sophisticated PC program enables the clerk to: Access the court calendar; Record all court events; Produce minute orders and other court documents; Update the court's case-management system, and much more.

When the hearing is over, the push of a button updates the appropriate back-office systems while the clerk starts work on the next hearing. *Proceedings* eliminates the need to record court events with paper and pen!

Post Rulings Efficiently

Post your Tentative Rulings quickly and efficiently to the Web and to your phone system with our **Tentative Rulings** module. The easy-to-use Web interface will assist your employees in getting this task handled without delay.

Web Pop Interactive

The **Web Pop Interactive** module provides all relevant call data to your staff in an easy-to-read web browser that "pops up" on your contact center agents' screens. This provides your staff with the detailed information needed to quickly assist callers. We integrate our Web Pop Interactive with many phone and IVR systems and integrate it with your case management and jury management systems.

Custom Programming, Analysis and Documentation Services

ATI has a talented team of developers that are on hand to assist the court with Custom Interface Solutions to the case management system, jury system or just about any database system. If you are not sure about a particular need or how to handle a special project, give us a call! We can also do a process evaluation/analysis and document all existing processes at the Court.

Voice Over IP & Traditional Phone Systems

ATI has extensive experience with Implementation and Support of industry-leading phone system technology to the courts. Unify all your court locations under a single, centrally-managed, distributed phone system architecture, and realize the lowest TCO (total cost of ownership) possible, with easy-to-use, easy-to-manage, reliable, scalable, and robust solutions. Improve your call flows and more efficiently serve the public. If you've already implemented a Voice Over IP solution, ask how we can integrate your current phone system technology into your Case Management and Jury Management Systems to streamline the court's caller interactions.
