## Record Court Proceedings in Real Time

**Proceedings** is a fast, reliable, easy-to-use in-court processing system for court clerks. Using a sophisticated PC program with a simple interface, the clerk can:

- Access the court calendar
- Record all court events
- Produce minute orders
- Produce all court documents
- Update case management system in real-time during the court hearing

When a case is called, the clerk simply selects the case from a list and records events using a straight-forward interface that is designed to follow the flow of a hearing.

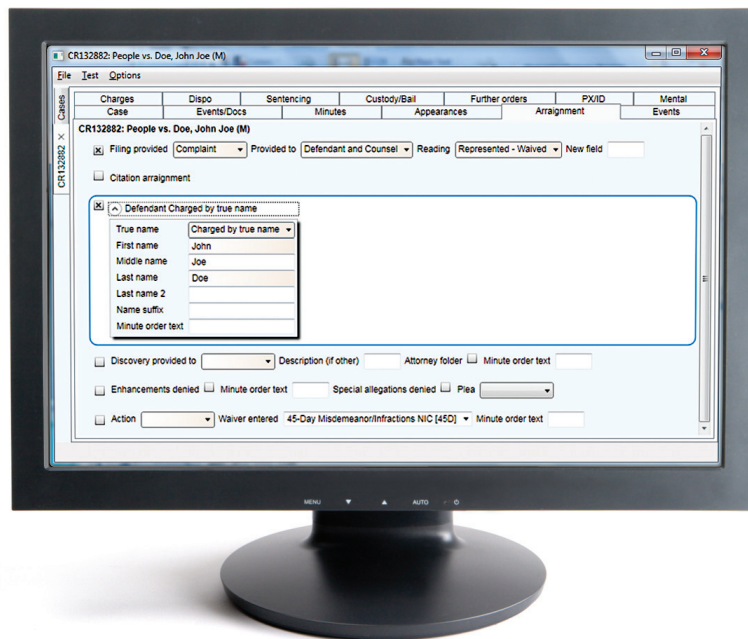

When the hearing is over, the push of a button updates the appropriate back-office systems (in the background) while the clerk starts working on the next hearing. There is no down time waiting for files to save. Trailing matters, inputting future events, and pulling in cases not previously on calendar are made available with a click.
